Your hearing • Our passion

# Focus On What You Want to Hear

Digital cameras are widely used across the world. They let us bring valuable moments into focus, capture them, and share them with others. Digital hearing instruments are not so different. They allow you to focus on what you want and need to hear, and engage in conversations with your loved ones, friends and colleagues.

Bernafon's newest hearing instrument family, Acriva, helps you to bring those valuable moments into focus again.

# Focus On State-of-the-Art Technology

Acriva demonstrates Bernafon's excellence in Swiss-engineered hearing systems. Developed in Bern, Switzerland, Acriva is equipped with Bernafon's proprietary Audio Efficiency™ 2.0 technology. This gives you improved speech understanding, listening comfort and individualization based on your personal needs and preferences.

# Focus On Your Needs

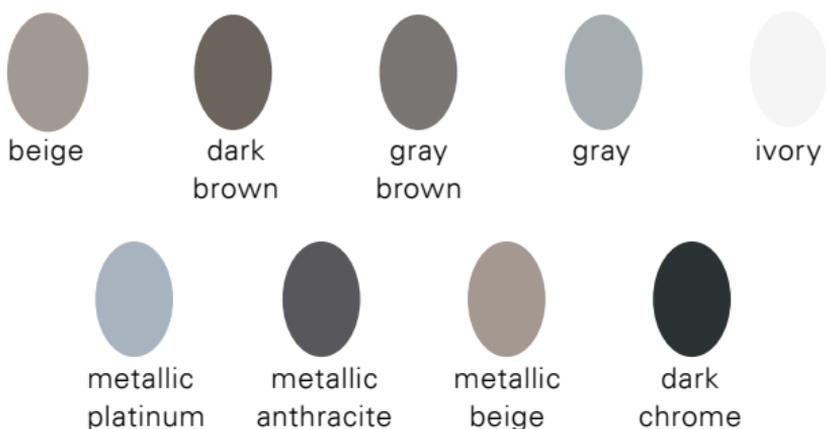

**Hear what you want to hear.** Acriva improves speech understanding and provides clear and natural sound using Bernafon's proprietary ChannelFree™ signal processing. Whether you are out for dinner with friends, at home with your family or listening to a presentation during a meeting, Acriva will not let you down.

**Get rid of annoying noise.** Acriva creates an ideal acoustic experience by getting rid of unwanted noise around you as well as suppressing any feedback coming from the hearing instrument itself. This makes Acriva extremely comfortable to wear and reduces your listening effort.

# Focus On Your Preferences

Acriva provides a wide range of different styles, features, and colors for you to choose from.

Behind-the-ear color range

With SoundGate 2, Acriva also gives you the freedom to wirelessly connect to various sound sources. Enjoying music, TV shows, or simply talking to friends via a mobile or landline phone has never been easier.

SoundGate 2 is the wireless interface between your hearing instruments and multiple electronic devices.

To learn more about Acriva, contact your hearing care professional today.

Hearing and understanding are basic human needs. Hearing problems and the resulting social consequences represent a challenge to society. We believe in a world where people with restricted hearing can communicate again thanks to advanced technology.
